

AEO/SEO Report — <https://www.securin.io/about-us>

<https://www.securin.io/about-us> scored 20/50 (40.0%, high priority). 8 deficiencies, 8 recommendation(s). Validated: simulated score rises to 22/50 (+2). Review: pending.

Overview

Score	20/50 (40.0%)
Priority	high
Page type	about
Query intent	navigational
Review	pending

Criterion scores (weakest first)

#	Criterion	Score	Evidence
●■■■■■	answer_readability	1/5	too little readable content
●■■■■■	citation_signals	1/5	no author; no date; no authority links
●■■■■■	content_depth	1/5	34 words; below 400-word credit threshold
●■■■■■	heading_structure	1/5	0% question headings
●■■■■■	qa_blocks	1/5	0 Q&A pair(s)
●■■■■■	schema_markup	1/5	No structured data found
●■■■■■	stats_in_html	1/5	0 distinct statistic(s)
●●■■■	load_speed	3/5	PageSpeed unavailable — neutral score
●●●●●	entity_consistency	5/5	Entity named with no first-person language
●●●●●	render_accessibility	5/5	inflation ratio 1.00

Recommendations (priority order)

1. [content/answer_readability] Improve answer_readability

why: Target score for 'answer_readability': 4/5. A about page should include: Organization schema, team/credentials, trust signals. Aim for ~500 words.

- Tighten the prose: shorter sentences, one idea per paragraph, and clear sub-sections so an engine can lift a clean answer passage.

2. [content/citation_signals] Improve citation_signals

why: Target score for 'citation_signals': 4/5. A about page should include: Organization schema, team/credentials, trust signals. Aim for ~500 words.

- Add an author byline with credentials, a visible publish/updated date, and links to authoritative sources (NIST, CISA, MITRE, OWASP).

3. [content/content_depth] Improve content_depth

why: Target score for 'content_depth': 4/5. A about page should include: Organization schema, team/credentials, trust signals. Aim for ~500 words.

- Deepen the page with methodology, data, and worked examples; thin content rarely earns citations. Aim for ~500 words for a about page.

4. [content/heading_structure] Improve heading_structure

why: Target score for 'heading_structure': 4/5. A about page should include: Organization schema, team/credentials, trust signals. Aim for ~500 words.

- Rewrite H2/H3 headings as the questions users ask or as named concepts (e.g. 'What is X?', 'How does Y work?') under a single descriptive H1.

5. [content/qa_blocks] Improve qa_blocks

why: Target score for 'qa_blocks': 4/5. A about page should include: Organization schema, team/credentials, trust signals. Aim for ~500 words.

- Add an FAQ section: 3-6 questions phrased the way your audience asks them, each answered in 2-4 concise sentences placed directly under the question heading.

6. [schema/schema_markup] Add Organization JSON-LD (Securin)

why: 'Securin' is the page's primary entity but has no Organization markup, weakening entity recognition by answer engines.

- Add Organization JSON-LD (ready-to-paste markup in payload)

7. [content/stats_in_html] Improve stats_in_html

why: Target score for 'stats_in_html': 4/5. A about page should include: Organization schema, team/credentials, trust signals. Aim for ~500 words.

- Add concrete, sourced statistics as plain HTML text — percentages, counts, CVE/CVSS figures, dates. Answer engines preferentially quote specific numbers.

8. [content/load_speed] Improve load_speed

why: Target score for 'load_speed': 4/5. A about page should include: Organization schema, team/credentials, trust signals. Aim for ~500 words.

- Improve mobile performance: compress images, defer non-critical JS, and cache static assets — slow pages are weighted lower.

AEO/SEO Report — <https://www.securin.io/articles/ai-agents-are-quietly-creating-the-next-attack-surface-crisis>

<https://www.securin.io/articles/ai-agents-are-quietly-creating-the-next-attack-surface-crisis> scored 24/50 (48.0%, high priority). 7 deficiencies, 8 recommendation(s). Validated: simulated score rises to 27/50 (+3). Review: pending.

Overview

Score	24/50 (48.0%)
Priority	high
Page type	blog
Query intent	informational
Review	pending

Criterion scores (weakest first)

#	Criterion	Score	Evidence
●■■■■■	citation_signals	1/5	no author; no date; no authority links
●■■■■■	heading_structure	1/5	missing_h1
●■■■■■	qa_blocks	1/5	0 Q&A pair(s)
●■■■■■	schema_markup	1/5	No structured data found
●■■■■■	stats_in_html	1/5	0 distinct statistic(s)
●●■■■	entity_consistency	3/5	entity:first-person ratio = 1.00
●●■■■	load_speed	3/5	PageSpeed unavailable — neutral score
●●●■■	answer_readability	4/5	5 passages
●●●■■	content_depth	4/5	942 words
●●●●●	render_accessibility	5/5	inflation ratio 0.88

Recommendations (priority order)

1. [content/citation_signals] Improve citation_signals

why: Target score for 'citation_signals': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add an author byline with credentials, a visible publish/updated date, and links to authoritative sources (NIST, CISA, MITRE, OWASP).

2. [content/heading_structure] Improve heading_structure

why: Target score for 'heading_structure': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Rewrite H2/H3 headings as the questions users ask or as named concepts (e.g. 'What is X?', 'How does Y work?') under a single descriptive H1.

3. [content/qa_blocks] Improve qa_blocks

why: Target score for 'qa_blocks': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add an FAQ section: 3-6 questions phrased the way your audience asks them, each answered in 2-4 concise sentences placed directly under the question heading.

4. [schema/schema_markup] Add Organization JSON-LD (Securin)

why: 'Securin' is the page's primary entity but has no Organization markup, weakening entity recognition by answer engines.

- Add Organization JSON-LD (ready-to-paste markup in payload)

5. [schema/schema_markup] Add BreadcrumbList JSON-LD

why: The URL has a clear section hierarchy but no BreadcrumbList markup; breadcrumbs help engines place the page in site context.

- Add BreadcrumbList JSON-LD (ready-to-paste markup in payload)

6. [content/stats_in_html] Improve stats_in_html

why: Target score for 'stats_in_html': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add concrete, sourced statistics as plain HTML text — percentages, counts, CVE/CVSS figures, dates. Answer engines preferentially quote specific numbers.

7. [entity/entity_consistency] Improve entity consistency

why: Target score for 'entity_consistency': 4/5. The page names Securin 3 time(s) but uses first-person language (we/our/us) 3 time(s); answer engines attribute claims to a named entity, not an anonymous 'we'.

- Replace first-person phrasing (we/our/us) with 'Securin' in claims and descriptions. The page names Securin 3 time(s) against 3 first-person reference(s); aim for at least parity so the brand — not an anonymous 'we' — owns each claim.

8. [content/load_speed] Improve load_speed

why: Target score for 'load_speed': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Improve mobile performance: compress images, defer non-critical JS, and cache static assets — slow pages are weighted lower.

- Add an author byline with credentials, a visible publish/updated date, and links to authoritative sources (NIST, CISA, MITRE, OWASP).

3. [content/heading_structure] Improve heading_structure

why: Target score for 'heading_structure': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Rewrite H2/H3 headings as the questions users ask or as named concepts (e.g. 'What is X?', 'How does Y work?') under a single descriptive H1.

4. [content/qa_blocks] Improve qa_blocks

why: Target score for 'qa_blocks': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add an FAQ section: 3-6 questions phrased the way your audience asks them, each answered in 2-4 concise sentences placed directly under the question heading.

5. [schema/schema_markup] Add Organization JSON-LD (Securin)

why: 'Securin' is the page's primary entity but has no Organization markup, weakening entity recognition by answer engines.

- Add Organization JSON-LD (ready-to-paste markup in payload)

6. [schema/schema_markup] Add BreadcrumbList JSON-LD

why: The URL has a clear section hierarchy but no BreadcrumbList markup; breadcrumbs help engines place the page in site context.

- Add BreadcrumbList JSON-LD (ready-to-paste markup in payload)

7. [entity/entity_consistency] Improve entity consistency

why: Target score for 'entity_consistency': 4/5. The page names Securin 1 time(s) but uses first-person language (we/our/us) 2 time(s); answer engines attribute claims to a named entity, not an anonymous 'we'.

- Replace first-person phrasing (we/our/us) with 'Securin' in claims and descriptions. The page names Securin 1 time(s) against 2 first-person reference(s); aim for at least parity so the brand — not an anonymous 'we' — owns each claim.

8. [content/load_speed] Improve load_speed

why: Target score for 'load_speed': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Improve mobile performance: compress images, defer non-critical JS, and cache static assets — slow pages are weighted lower.

AEO/SEO Report — <https://www.securin.io/articles/threat-intelligence-brief-handala-void-manticore>

<https://www.securin.io/articles/threat-intelligence-brief-handala-void-manticore> scored 25/50 (50.0%, high priority). 7 deficiencies, 8 recommendation(s). Validated: simulated score rises to 28/50 (+3). Review: pending.

Overview

Score	25/50 (50.0%)
Priority	high
Page type	blog
Query intent	informational
Review	pending

Criterion scores (weakest first)

#	Criterion	Score	Evidence
●■■■■■	answer_readability	1/5	long sentences (37 words avg); 5 passages
●■■■■■	heading_structure	1/5	missing_h1
●■■■■■	qa_blocks	1/5	0 Q&A pair(s)
●■■■■■	schema_markup	1/5	No structured data found
●●■■■■	citation_signals	2/5	no author; no date
●●■■■■	entity_consistency	2/5	entity:first-person ratio = 0.50
●●●■■■	load_speed	3/5	PageSpeed unavailable — neutral score
●●●●■	stats_in_html	4/5	7 distinct statistic(s)
●●●●●	content_depth	5/5	4153 words
●●●●●	render_accessibility	5/5	inflation ratio 0.98

Recommendations (priority order)

1. [content/answer_readability] Improve answer_readability

why: Target score for 'answer_readability': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Tighten the prose: shorter sentences, one idea per paragraph, and clear sub-sections so an engine can lift a clean answer passage.

2. [content/heading_structure] Improve heading_structure

why: Target score for 'heading_structure': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Rewrite H2/H3 headings as the questions users ask or as named concepts (e.g. 'What is X?', 'How does Y work?') under a single descriptive H1.

3. [content/qa_blocks] Improve qa_blocks

why: Target score for 'qa_blocks': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add an FAQ section: 3-6 questions phrased the way your audience asks them, each answered in 2-4 concise sentences placed directly under the question heading.

4. [schema/schema_markup] Add Organization JSON-LD (Securin)

why: 'Securin' is the page's primary entity but has no Organization markup, weakening entity recognition by answer engines.

- Add Organization JSON-LD (ready-to-paste markup in payload)

5. [schema/schema_markup] Add BreadcrumbList JSON-LD

why: The URL has a clear section hierarchy but no BreadcrumbList markup; breadcrumbs help engines place the page in site context.

- Add BreadcrumbList JSON-LD (ready-to-paste markup in payload)

6. [content/citation_signals] Improve citation_signals

why: Target score for 'citation_signals': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add an author byline with credentials, a visible publish/updated date, and links to authoritative sources (NIST, CISA, MITRE, OWASP).

7. [entity/entity_consistency] Improve entity consistency

why: Target score for 'entity_consistency': 4/5. The page names Securin 1 time(s) but uses first-person language (we/our/us) 2 time(s); answer engines attribute claims to a named entity, not an anonymous 'we'.

- Replace first-person phrasing (we/our/us) with 'Securin' in claims and descriptions. The page names Securin 1 time(s) against 2 first-person reference(s); aim for at least parity so the brand — not an anonymous 'we' — owns each claim.

8. [content/load_speed] Improve load_speed

why: Target score for 'load_speed': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Improve mobile performance: compress images, defer non-critical JS, and cache static assets — slow pages are weighted lower.

●■■■■■	schema_markup	1/5	No structured data found
●■■■■■	stats_in_html	1/5	0 distinct statistic(s)
●●■■■	answer_readability	2/5	6 passages
●●■■■	citation_signals	2/5	no author; no date
●●■■■	entity_consistency	2/5	entity:first-person ratio = 0.50
●●●■■	content_depth	3/5	662 words
●●●■■	load_speed	3/5	PageSpeed unavailable — neutral score
●●●●●	render_accessibility	5/5	inflation ratio 0.89

Recommendations (priority order)

1. [content/heading_structure] Improve heading_structure

why: Target score for 'heading_structure': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Rewrite H2/H3 headings as the questions users ask or as named concepts (e.g. 'What is X?', 'How does Y work?') under a single descriptive H1.

2. [content/qa_blocks] Improve qa_blocks

why: Target score for 'qa_blocks': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add an FAQ section: 3-6 questions phrased the way your audience asks them, each answered in 2-4 concise sentences placed directly under the question heading.

3. [schema/schema_markup] Add Organization JSON-LD (Securin)

why: 'Securin' is the page's primary entity but has no Organization markup, weakening entity recognition by answer engines.

- Add Organization JSON-LD (ready-to-paste markup in payload)

4. [schema/schema_markup] Add BreadcrumbList JSON-LD

why: The URL has a clear section hierarchy but no BreadcrumbList markup; breadcrumbs help engines place the page in site context.

- Add BreadcrumbList JSON-LD (ready-to-paste markup in payload)

5. [content/stats_in_html] Improve stats_in_html

why: Target score for 'stats_in_html': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add concrete, sourced statistics as plain HTML text — percentages, counts, CVE/CVSS figures, dates. Answer engines preferentially quote specific numbers.

6. [content/answer_readability] Improve answer_readability

why: Target score for 'answer_readability': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Tighten the prose: shorter sentences, one idea per paragraph, and clear sub-sections so an engine can lift a clean answer passage.

7. [content/citation_signals] Improve citation_signals

why: Target score for 'citation_signals': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Add an author byline with credentials, a visible publish/updated date, and links to authoritative sources (NIST, CISA, MITRE, OWASP).

8. [entity/entity_consistency] Improve entity consistency

why: Target score for 'entity_consistency': 4/5. The page names Securin 2 time(s) but uses first-person language (we/our/us) 4 time(s); answer engines attribute claims to a named entity, not an anonymous 'we'.

- Replace first-person phrasing (we/our/us) with 'Securin' in claims and descriptions. The page names Securin 2 time(s) against 4 first-person reference(s); aim for at least parity so the brand — not an anonymous 'we' — owns each claim.

9. [content/content_depth] Improve content_depth

why: Target score for 'content_depth': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Deepen the page with methodology, data, and worked examples; thin content rarely earns citations. Aim for ~1200 words for a blog page.

10. [content/load_speed] Improve load_speed

why: Target score for 'load_speed': 4/5. A blog page should include: Article schema, author + date, citations, takeaways. Aim for ~1200 words.

- Improve mobile performance: compress images, defer non-critical JS, and cache static assets — slow pages are weighted lower.

AEO/SEO Report — <https://www.securin.io/articles/what-june-6th-s-executive-order-means-for-your-security-strategy>

<https://www.securin.io/articles/what-june-6th-s-executive-order-means-for-your-security-strategy> scored 24/50 (48.0%, high priority). 8 deficiencies, 9 recommendation(s). Validated: simulated score rises to 27/50 (+3). Review: pending.

Overview

Score	24/50 (48.0%)
